

# Tuberculin Test Is Not Harmful

## Treatment Cannot Possibly Cause Either Abortion or Sterility.

(Prepared by the United States Department of Agriculture.)  
 "The tuberculin testing of cattle cannot possibly cause either abortion or sterility." This statement by Dr. J. R. Mohler, chief of the bureau of animal industry, United States Department of Agriculture, is a reply to assertions sometimes heard that tuberculin when injected into a cow may cause her to abort or become sterile.

### Record of One Cow.

At a recent hearing before a congressional committee, Doctor Mohler reported extended observations on this subject in answer to the inquiry of Congressman L. J. Dickinson, of Iowa. "The bureau has the record of one cow," Doctor Mohler stated, "which received over 1,100 cubic centimeters of tuberculin at one time and that cow lived to be eighteen years old and was never known to abort." The cow produced many healthy calves during that time, Doctor Mohler explained.

"Furthermore," he continued, "no cases have been recorded in the literature on the subject which would lead even to the suspicion that either abortion or sterility is caused by the injection of tuberculin. I have personally injected large numbers of pregnant cows with from 50 to 50 drops of tuberculin subcutaneously, which is the old method of injecting tuberculin, and have yet to see the first cow slink her calf as the result of the test. With the modern method of intradermal testing which is followed in over 95 per cent of our work, only two drops of tuberculin are injected into the fold of the tail. The claim that such a small amount of tuberculin will produce abortion or sterility is purely a figment of the imagination and without any foundation in fact."

### Tested Annually.

"For instance, almost in the shadow of this Capitol building," Doctor Mohler continued, "there are two government-owned herds averaging from 150 to 200 cows each, which have been tuberculin tested annually and sometimes semi-annually for at least two decades, and they are free not only of tuberculosis but of abortion as well, despite the fact that the annual tuberculin test is still being applied."  
 The foregoing statement is supported by the wide observation of pathologists and veterinarians of the United States Department of Agriculture who have devoted many years of study to animal diseases, both in the course of research work and in herds and flocks throughout the country.

## Build Up Productivity of Soil and Retain It

Comparing the farm to a factory in a recent publication by the United States Department of Agriculture, the authors, A. T. Wiancko and S. D. Con-

nor, say: "The farmer should know his soil and have a sound basis for every step in its treatment. Building up the productivity of a soil to a high level and then maintaining it, is an achievement for which every farmer should strive. The business of farming should be conducted as intelligently and as carefully as a manufacturing business. Every process must be understood and regulated from the raw material to the finished product, in order to be uniformly successful. The farmer's factory is his farm. Different soils present different problems. It is important, therefore, that soils be studied and understood in order that the production of crops may be most satisfactory and profitable. No system of soil management can be satisfactory that does not in the long run bring profitable returns. Some soil treatments and methods of management may be profitable for a time, but ruinous in the end. One-sided or unbalanced soil treatments have been altogether too common in the history of farming in this country. A properly balanced system of treatment will make almost any soil profitably productive."

## Dangerous to Turn Cows on Pastures Too Early

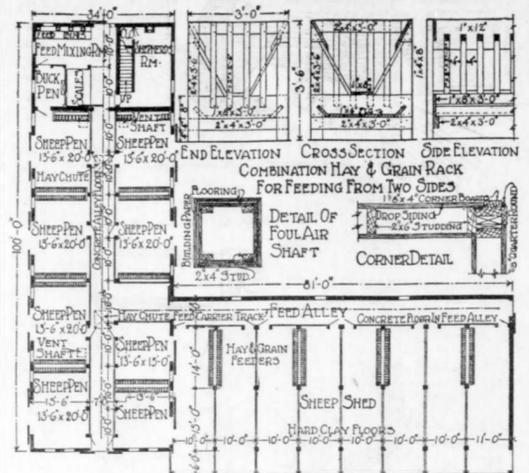

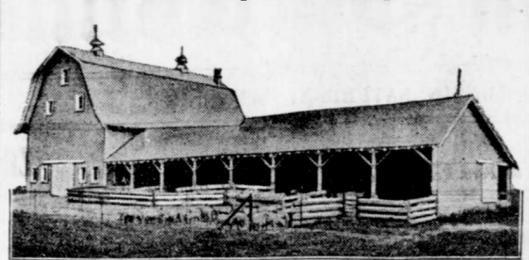

Turning cows out on the pastures too soon in the spring is one of the common mistakes milk producers make, according to dairy specialists from a State college, and this year the tendency will be greater than before because of the general shortage of feed.

To turn the cows out in the pastures too early hurts the pastures, and the feed value of the pastures is especially low so that it hurts the cows, early grass consisting mostly of water. Wait until the grass gets a good start and take the cows off winter roughage feeds gradually, advise the extension men. Six to eight weeks after the cows have been on pasture the medium producers will do fairly well on grass alone. With high producers, however, the grain allowance should be continued but may be cut down a few pounds.

## Combine Has Advantage, Saving Grain and Labor

Besides saving an immense amount of labor to the harvesting and threshing of grain, the combine also has the advantage of wasting less grain than any other method of harvesting. Every farmer knows that there is a certain amount of grain lost behind the cutter-bar of a binder, as well as some shattering in the binding mechanism and when the bundles are dropped. A further loss occurs in shocking, still more in loading and unloading, and there is always some waste around the threshing machine, besides the small amount which usually goes through with the straw unless the machine is very carefully operated. The total loss with the binder method varies, of course, with the condition of the grain, but it is always appreciable.

## Modern Sheep Barn and Shed That Provide Proper Housing for Flock

By WILLIAM A. RADFORD  
 Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

With high prices for lambs for slaughter and good prices for wool, a farm flock of sheep of considerable proportions is a paying part of farming. To be successful with sheep, however, it is necessary that they and their feed be housed in a modern barn, where the proper conditions for their health and the health of the lambs may be maintained.

Shown in the illustration are plans for a modern sheep barn with an open feeding shed attached. This building is of the type used by those who are raising sheep and lambs successfully. It is designed to keep the animals healthy and to permit those who care for the flock to perform the necessary work efficiently.

The barn is a regular two-story

structure with pens on the ground floor and mow space above, where the forage for the flock is stored. The pen floor is equipped with partitions, feeding racks, etc., and is ventilated with a suction ventilation system. Sheep need plenty of fresh air, but are susceptible to drafts, so that such a system as is indicated on the plans is necessary. The feeding shed adjoining the barn is open on one side, the other three being closed on the sides toward the direction of the winds prevalent in the section where the building is erected.

A study of the floor plan will show the arrangement of the first floor of the barn and of the feeding shed. There is a feed mixing room, a pen for the buck and a shepherd's room. The pens are partitioned so that the ewes and their lambs may be separated into small groups.

The feeding shed is open so that the sheep may have a free run of the space and access to the feed racks.

This building should be erected on a site that is high so that there will be good drainage, and the floors constructed so that they will be dry at all times.

## Foundation Footing Is Called Important Item

Throughout all the planning now going forward of new homes to be built this year, one item of the utmost importance to the home owner, but too frequently overlooked, should be placed first in rank of things to be watched.

This is the foundation footing. Upon the adequacy of the footing depends the durability and satisfaction derived from every part of the house. Even the most strongly constructed frame or masonry wall, for instance, cannot withstand the unequal strains imposed by a settling foundation without showing distortion which results in cracked plaster, sagging floors or roof, and other serious troubles.

The first consideration in constructing the footing is the sustaining power of the soil or rock upon which it is placed.

Sandy or loose soil requires greater total area of the footing to give proportionate spread, while stable rock requires practically no footing excepting an effective bond with the masonry foundation, obtainable by carefully washing off the rock and bonding with good mortar, whatever the foundation masonry material.

Where ordinary trench footings are used all around, the ground beneath should be tamped to increase its density. The footing materials should be portland cement, clean sharp sand and clean aggregate usually in the form of crushed rock.

The mixture most often used is one part cement to two and one-half of sand and five of stone or gravel.

Where conditions demand that part of the footing be placed upon rock and part upon soil or upon strata which vary in density of the underlying material at different points around the foundation, careful provision should be made to equalize the supporting power of the footing.

## Lead Coating on Fences Prevents Rusting Wires

Fencing material protected by a coating of lead is declared to be impervious to corrosion for years. The lead is more flexible and thicker than other coatings, resisting abrasion and bending to a high degree.

The material is supplied in all thicknesses and types of wire, including the barbed variety. Fences of this type may well be used to inclose home grounds.

## Double Weathering Adds to Tightness of Windows

Basement windows must not only admit daylight but also must shut out wind and rain so tightly that chilling drafts do not penetrate to the cellar, to the detriment of heating plant efficiency. A new type steel basement window employing double-contact weathering insures the quality of tightness by interposing an air cushion between the two contacts.

These windows are constructed of

## Colonial Style Came Over With the Early Settlers

While siding and shingle exterior coverings for homes did not strictly originate in this country, being largely modifications of existing methods brought over by the early settlers, the availability of the materials and suitability to native architecture give houses sheathed in siding or shingles a distinctly American flavor.

Houses covered with rough-hewn siding boards, or clapboards, and crudely split shakes, or shingles, directly succeeded in the first log cabins of the early colonists in this country. These materials have been refined by improved methods of manufacture into types which are individually appropriate to the variations of modern colonial architecture and to the architectural of other countries in American adaptations.

Cedar and pine, and other durable native woods, are used in modern manufacture of shingles and siding, which are frequently stained to enhance their appearance and resistance to weather. Wood siding and shingles have integral insulating value in themselves, increasing comfort and fuel economy in the winter and keeping the home cool in summer.

## Adequate Lighting

The first essential in room comfort nowadays is the provision for a sufficient amount of light for all occasions and enough outlets to permit the attachment of occasional electric appliances at points desired. This is only achieved in a home with adequate wiring installation, more and more coming to be accepted as standard in the modern dwelling.

rust-resisting steel. They may be quickly fitted into openings left in cellar walls of any masonry material. For use in concrete block walls, an end plate is furnished which assures of proper installation.

The windows are equipped with hinges of the hook type, facilitating removal and replacement. A cam-actuating lever latch gives security against unauthorized entrance and maintains tightness of the weathering contacts.

## New Screens

Screens of bronze wire, conveniently arranged so that they easily roll out of sight and which do not interfere with drapes, are items of equipment for which consideration is timely. The rolling type of screen is a permanent fixture and does not require periodic installation and storing.

## Face Brick

From a wall of diversified color effect to one of quiet monotone of any shade, simulating dressed stone, is the range of surface tone variety available today in face brick.

## PRETTY LITTLE FLOWER HATS; CHIC ENSEMBLE OF GAY PRINT

BEHOLD the flower hat! It's here in myriad forms and colors and its vogue is outstanding. It is difficult to imagine anything more expressive of the new spirit of femininity which holds sway in fashion's realm, than the flowery ultra-chic eyebrow hats which animate the present-day style picture.

Just now interest centers about the close-fitting flower toques whose nose wells give them a decidedly "frenchy" appearance. Tiny flat flowers are used for the making of these cunning hats. These may or may not form the entire hat, for it is as stylish for a hat to be half-in-half straw and flowers as for it to be all-flowered.

As in nature's flower garden, so in fashion's—a primrose toque here, a

group. It is of transparent hair in old rose shade. The leaves and buds carry out a clever colorful design.

While hats of the sort which are shown here are answering the immediate call there is every promise for a summer season of lovely feminine picturesque types featuring widened brims, charming old-fashioned straws, lacy transparent effects and a profusion of flowers.

Sleeveless the blouse, short the cunning jacket, two-flounce tiered the skirt. The aforesaid styling expressed in terms of gay print crepe with plain, as here pictured, bespeaks none other than a most likable, wearable, youthful and chic summer-time costume.

In adopting gay prints as media for coat and jacket ensembles, the mode

Some Flower Hats.

violet chapeau there, others of big spreading poppy petals and one of the smartest flower types is that made of blue-as-blue-can-be corn-flowers. The collection of representative flower hats shown here divides honors between the all-flower types and those of straw with flowers. The first hat with the off-the-face effect is one of the new linen straws. It is soft green with variegated green velvet

is adding a unique and fascinating chapter to the story of spring and summer fashions. Novelty never fails to arouse enthusiasm in the realm of dress, and that is one of the reasons why coats and jackets of vivacious prints with matching skirts are making a tremendous "hit" this season.

For these fetching daytime ensembles, simple washable weaves, or costly silks, it matters not—the print's the thing! If one material may be said to be more in favor than another for these cunning colorful ensembles, crepe de chine printed in quaint patterns is "it." As to the styling of these youthful animated prints, it is of the simplest, given to softly feminine lines, as is that of the attractive model in the picture.

It would be difficult to conceive of a more suited-to-all-hours-of-the-daytime mode, than this one. The frock being sleeveless, it proclaims chic no less than it assures wearableness. "Without sleeves," a most important style message this, especially in regard to sports frocks for summer. With a coat to slip on at will, or off, when occasion calls there is untold comfort to be derived from a frock of this sort, not to mention outstanding smartness. Paris has called of the more feminine silhouette, flounced skirts, for instance, which accounts for the two-

Two Attractive Costumes.

petals. Of course, it has a perky vanity veil. So many of the little hats do. Pale pink apple blossoms are uniquely worked into the making of the handsome hand-sewn hair braid hat, shown at the top to the right. There is much enthusiasm being shown for novel straw and flat-flower combinations.

Another little veil accompanies the white violet toque at the left—which is not surprising for they are popular both here and abroad. The other violet toque is in the alway beloved Parme shade. A side trim is formed of long pointed green velvet leaves.

An adorable model concludes the

tered ruffles which grace this particular model.

Some women are buying inexpensive artificial silks in gay prints or figured cotton crepes, making them up in similar fashion to the mode shown here. Hand-blocked linens and piques are also handsomely styled with matching coats or jackets.

Wonderfully effective for the print suit is patterned shantung and if it be polka-dotted, then indeed has it reached the zenith of that which is fashionable. Shantung yields to simple treatments and therefore is stunning for washable ensembles.

JULIA BOTTOMLEY,  
 (© 1924, Western Newspaper Union.)

## Straw Leads Materials

Straw leads the mode and the best versions of this popular fabric are lacy, ballbunt, pineapple (a lovely lacy straw), tuscan, lacquered straws, and hair braids for the dressier type of hat.

## Pink Facings

Many spring hats use pink facings. A black baku has pink felt facing its squared brim that points on each side and turns up front and back.

## Jacket Frock

A red tulle evening gown has a sleeveless jacket of red embroidered in gold, black and yellow design. Its wide sash with large hip bow is of taffeta.

## Gypsy Girdle

A white dinner gown has a gypsy girdle swathing the hipline which terminates in front in two graduated looped panels of Cerulean blue, gold edged.

THERE is nothing that has been taken the place of Bayer Aspirin as an antidote for pain. Safe, as physicians wouldn't use it, and endorse it by others. Sure, or several million users would have turned to something else. But get real Bayer Aspirin (at any drugstore) with Bayer on the box, and the word genuine printed in red.

Aspirin is the trade mark of Bayer Manufacture of Monocelceideolator of Salisburgo.

 "Yes, I haven't."—Life.

## CAN'T PRAISE IT ENOUGH

Lydia E. Pinkham's Vegetable Compound Helped Her So Much

Kingston, Mo.—"I have not taken anything but Lydia E. Pinkham's Vegetable Compound for 15 months and I cannot praise it enough. I weighed about 100 pounds and was not able to do any kind of work. My housework was done by my mother and my out-of-doors work was not done. I have taken four bottles of the Vegetable Compound and now I am well and strong and feel fine. I got my sister-in-law to take it after her baby came and she is stronger now. I cannot praise it enough."  
 HARRIE V. EASTIN, R. 1, Kingston, Missouri.

Expensive Laugh  
 It is mighty pleasant to make a laugh and to tingle in the opinion of one's wit, says the modern philosopher, but there is no surer way of rousing the hate of that wit's neighbors than to laugh at them.

Too Bad  
 Baldheaded Man—"Give me a soap." Barber—"Sorry, but I'm out of facial soap, sir."

Friends are not particularly pleasing; they only make life worth living, that's all.

## LIFE'S LITTLE JESTS

### POOR BUT HAPPY

"You have been coming to Washington a great many years."  
"Yes," answered Senator Sorghum "and I have shown my love of country in doing so."  
"You mean you have made sacrifices?"  
"Well, I don't exactly say a government is ungrateful, but it doesn't measure up to a big corporation in making up a liberal pay roll."—Washington Star.

### With the Spaces

Knobryne—Every evening before I go to bed I write down my thoughts in my diary. Interesting, don't you think?  
Nina—Oh, most. How long have you been doing it?  
"About a couple of years."  
"Then you must have the first page nearly full."

### BALLED UP RIGHT

Hubby—"Poor old Brown is balled up right this time." Wife—"Been in one of his little toots?" Hubby—"No, his wife put a 38 bullet into him last night."

### Significant Silence

The orator may find his skill into oblivion sinking. While he with gifts for keeping still. Gains credit for much thinking.

### Heavy Dogs

Madge—So Jack is no longer in your good graces. You found your idol had feet of clay, eh?  
Ethel—Worse. I danced with him and found he had feet of lead.

### Tough!

Clady—So your parents are going to have your marriage annulled?  
Betty—Yes. They think I'm a baby. I just can't make them think I'm old enough to get a divorce.

### HE WON'T RUN FAR

"Didja get hold of any dough, Jack, since you broke jail?"  
"Yeh, I got 100 bucks for runnin' expenses."

### Intimacy With Genius

While he kept silence, he seemed great. His art was fine in paint or putty. He talked an hour—to indicate that maybe he was kind of "nutty."

### Not Too Harsh

Dot—So they're married. Why, she's old enough to be his grandmother.  
Marge—Don't be unkind. But she is old enough to be his mother.

### No Courting House

Officer—You can't kiss that girl in here!  
Harold—But we're here to get married. Isn't this the courthouse?  
Officer—Yes, but not the courting house.

### Left Him Nothing

"You say that advertising ruins your business?"  
"I tried that last year, and the people bought out everything I had in the store."

### More Sophisticated

"Dearest," he said rather sadly. "It doesn't seem like the same old smile you used to give me."  
"No, Jack," she returned. "This is a new one. I've been studying at a school of dramatic art."

### Telling Her Symptoms

Doctor (meeting patient's hubby)—I don't suppose she suffered any after-effects of her illness?  
Husband—No, but everybody else did."

### Bringing Lonely Men and Women Together

A serious effort to solve the marriage problem for lonely men and women, who have about given up hope, has been undertaken by Le Quotidien, Paris newspaper.  
"There are no longer 'old maids,' for there are too many of them who travel life's road alone," says Madame Albine Albarum, a feminist writer, who is in charge of the work. In four years, working alone, she says, she has arranged 60 marriages, "none of them ending in divorce."  
She proposes to extend her efforts by publishing brief unsigned statements from both women and men, she meantime exercising what supervision she can over the "candidates" and their correspondence.

### CLOTHES IDEAS FROM ABROAD

Last fall when I was in France, I admired the dress which the daughter of our hostess was wearing, and she confessed it was three years old, originally rose-beige, now dyed a rich, deep shade of red! The French are eternally surprising you with thrifty little tricks like that—tricks which it pays to imitate.  
Most of us have dresses which, if allowed to remain their original color, are discarded or seldom worn. Dyed, they become favorites again.  
Just get a package or two of true, fadeless Diamond Dyes, and try your hand at tinting or dyeing. You'll be amazed to see how easy it is to use Diamond Dyes. They never disappear. The "know-how" is in the dye. They are real dyes like those used when the cloth was made. They never give things that dyed look, like make-shift, inferior dyes. The more than sixty colors you can get from them include everything that's fashionable.  
My new 64-page illustrated book, "Color Craft," gives hundreds of money-saving hints for renewing clothes and draperies. It's FREE. Write for it, NOW, to Mae Martin Home Service Dept., Diamond Dyes Burlington, Vermont.

### Change in Policy

"Use that guest towel hanging in the bathroom," a wife said to her husband.  
"After you have repeatedly warned me never to touch it? Well, I guess not! Not me," replied her mate.  
"Oh, I know," said the wife, "but it's turning yellow from disuse and I want to get some good out of it before it falls apart."—Great Bend Tribune.

### Most Daring Hawk

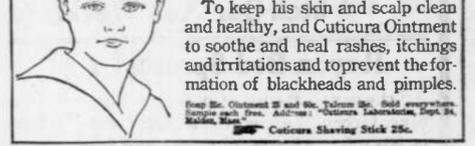

The American goshawk is the fiercest, most destructive and most daring of all the hawks. Because its breeding range is far north and it is fewer in number than the Cooper, the aggregate damage to poultry is less, though grouse and other game birds suffer greatly. Mammals and insects are also taken.

### The Real Thing

Prospective Purchaser—Is that a genuine English bulldog?  
Dealer—Why, say, that dog actually drops an "it" every time he barks.—Boston Transcript.

### True love forgives; but it is seldom accused of forgetfulness.

## Your Boy Needs Cuticura Soap

To keep his skin and scalp clean and healthy, and Cuticura Ointment to soothe and heal rashes, itchings and irritations and to prevent the formation of blackheads and pimples.

### Originator of "Little Eva" Found in Boston

Much against her will, Mrs. Cordelia Howard Macdonald, the first person to play the part of Little Eva in an "Uncle Tom's Cabin" show, has been discovered in Boston. Stage historians have been searching for members of the original cast for years. She is the only living member. When a writer for the Farm and Fireside Magazine found her hiding in an obscure boarding house, she reluctantly admitted that she was once the celebrated girl who enjoyed a popularity before the Civil war greater than that of any other child actor before or since. She reaffirmed her vow, however, never to talk about her days with the play that has been presented nearly 500,000 times since her first performance on September 27, 1852, in Troy, N. Y. Mrs. Macdonald gave no reason for her silence. Mrs. Macdonald, then Cordelia Howard, four years old, with her first performance started a record-breaking run of twenty-five days in the small town of Troy. Such a record then had only been equaled in London. Her triumph continued for eight years.

### A Wrong

President Lee of the Brotherhood of Railway Trainmen said in an interview in New York:  
"The Geneva economic conference has very rightly protested against those cartels, or monopolies, which greedily increase the cost of living."  
"The men who do the useful work of the world—the farmers who feed us, the sailors who sail our ships, the teachers who educate our children—these men are lucky if they succeed in accumulating a few thousand dollars in a lifetime of toil; but the cartels! They, by putting up a price or two, make millions overnight."  
Mr. Lee shook his head.  
"It's a wrong gain," he said, "that has no earning."

# STUDEBAKER'S \$795 ERSKINE SIX

## Sets Ten New Records by Traveling 1000 miles in 984 minutes

ON April 26, two strictly stock Erskine Club Sedans each traveled 1000 miles in less than 1000 consecutive minutes.  
The run took place at Atlantic City Speedway, and was supervised by officials of the American Automobile Assn. who verified the stock design of the cars.  
As a result, ten new records for stock cars under \$1000 were established by the Erskine Six. And Studebaker has demonstrated that its 76-year-old traditions for careful building are carried through in the design, materials and workmanship of this low-priced fine car—named for Albert Russel Erskine, Studebaker's president. That is why this car was able to travel 1000 miles at better than a mile a minute—why you can drive your Erskine Six 40 miles an hour even when NEW—why the Erskine is so economical to maintain and to operate.  
A drive in the New Erskine will introduce you to a type of performance as sensational for its price class as that of the World's Champion Commander is to the field of higher priced cars.

proving ITS CHAMPIONSHIP HERITAGE

### COUNTY LINE

Evelyn Butzke spent Saturday with Harold and Lucinda Hinn.

Mr. and Mrs. Arno Stahl spent Sunday with Mr. and Mrs. Steve Ketter. Mrs. Aug. Staeger was a caller at the Otto Hinn home Friday afternoon.

Mr. and Mrs. Wm. Koepke, and son Edwin, spent Tuesday with Mr. and Mrs. Rudy Koepke.

Mr. and Mrs. Otto Hinn and family spent Sunday with Mr. and Mrs. Alb. Butzke and son Lester.

Mrs. Steve Klein is spending a week at the home of her daughter, Mrs. Art. Jance and family at West Bend.

Mr. and Mrs. John Brandenburg and son Alvin, Mr. and Mrs. Henry Butzke and family spent Friday evening at the Otto Hinn home.

Mr. and Mrs. Steve Ketter and Mr. and Mrs. Wm. Vorpahl were Sheboygan callers Wednesday. They visited Geo. Ketter at St. Nicholas hospital.

### New Fish Found

A new kind of fish has been discovered off the coast of Rio de Janeiro. It is known as the ink stand fish because of the bone on the back which looks like a pen. When the pen is pulled up, the blood is black, and good enough to write. The bone pen handles as well as the best steel pen.

### Flower of Highest Value

The rose has a greater commercial value than any other flower, points out Liberty. Besides its high horticultural value, it produces attar of roses, an expensive perfume. Forty thousand flowers are required to produce one ounce.

### ST. MICHAELS

Mr. and Mrs. John Roden and children spent Sunday at the Peter Schiltz home.

Mrs. John Erier and son Walter of Chicago are visiting with the Paul Geier family.

A number from here attended the card party at Wayne, given for the benefit of St. Bridget's church.

Sunday was indeed a very happy day for the class of children who received their first holy communion. The church was beautifully decorated for the occasion. Father Beyer gave a very impressive sermon, the choir and the children rendered beautiful songs. The weather being ideal, a large number of relatives and friends were present at the ceremonies. Among those whom we noticed were the following: Mr. and Mrs. Wm. Stark and son, Mr. and Mrs. Martin Inkman and family, the Misses Lauretta and Rose Theisen, Miss Pauline Theusch and friend, all of Milwaukee, Mr. and Mrs. Wm. Muckerheide and family, Mr. and Mrs. Art. Naumann and family, Mrs. Kohn and family, all of Kewaskum.

Mr. and Mrs. Joe Wiskirchen, Mr. and Mrs. John Stockhausen and family of West Bend, Mrs. Peter Schiltz, Mrs. Joe Schiltz, Mrs. Ed. Uelmen of New Fane, Mrs. Peter Bell and family of East Valley, Mrs. Susan Fellenz, Mrs. Christina Janssen and children of Beechwood.

Subscribe for the Kewaskum Statesman and get all of the news of your community.

### CASCADE

A baseball team has been organized here.

Dan Murphy of Five Corners, called here Saturday.

Ed. Clark, who spent the winter at Spencer, has returned here.

## 5 years of service

is only a starting point for BUICK--Skilled engineering and rugged construction make it the most durable of motor cars!

Keep in mind when buying your new car, that more than three-quarters of all the Buick cars produced in the last twenty-five years are still serving their owners.

Buick endures—Buick stays young—Buick stands up and gives its best over a longer period than any other car—because it is endowed with an extra-rugged double-drop frame—Buick's world-famous Sealed Chassis and Triple-Sealed Engine—and the most nearly perfect oiling system ever developed—

You'll prefer Buick because it leads in beauty and luxury and you'll prefer it, too, because it is the most durable of cars—and therefore the most paying investment.

All Buick models have Lovejoy Hydraulic shock absorbers, front and rear, as standard equipment

SEDANS \$1195 to \$1995 COUPES \$1195 to \$1895

SPORT MODELS \$1195 to \$1525

All prices f. o. b. Flint, Mich., government tax is extra

The G.M.A.C. finance plan, the most desirable, is available

WHEN BETTER AUTOMOBILES ARE BUILT... BUICK WILL BUILD THEM

### MEMORIAL

In loving memory of our dear son Raymond Grieb, who passed away two years ago May 9, 1926.

In the graveyard softly sleeping, Where the flowers love to wave, Lies the one we love so dearly In his silent lonely grave,

In our heart there comes a longing If you only could come home, For in life we loved you dearly And in death we do the same,

Just two years ago you left us How we miss your loving face, But you left us to remember That none on earth can take your place.

Sadly missed by his mother and grand mother.

### NEW FANE

Mrs. Louis Hanser spent afternoon with Mrs. Frank Elmer and Theo. Dworschak and Wm. Elmer were business callers at Fond du Lac Tuesday.

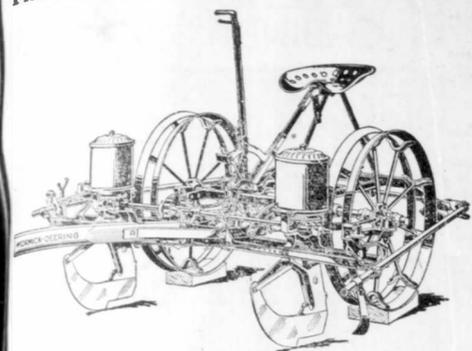

Mr. and Mrs. Clarence Kuehn Milwaukee visited Sunday with Mr. and Mrs. George Backhaus.

Mr. and Mrs. Frank Elmer and Mrs. Loran Keller spent Sunday with Mr. and Mrs. Milton Elmer and family.

Mr. and Mrs. Henry Moldenhauer and daughter Lillian attended funeral of a relative at Watertown Thursday.

Quite a number of young folks attended the barn dance at A. Steinhilber Saturday evening. Everybody had a good time.

## The Last Word in Planter Design

## McCormick-Deering Corn Planters and Drills.

If you want to see a real piece of corn planter mechanism come in and look this McCormick-Deering planter over. You will be surprised to see how so many good features have been secured with so few parts—check-row, straight drill, hill-drop drop plates work equally well. It has a simple, variable-drop device—you can change the number of kernels to the hill in shafts or in the case of a drill, you can change the distance between the kernels in the row. Runner or disk openers, automatic marker (twin disk if preferred), in fact equipment to suit your needs. It's the smoothest combination of time-proved principles you ever saw in a corn planter. Combination corn planter or bean hoppers, also fertilizer attachments are available.

**A. G. KOCH, Inc.**

Gordan Dalieque and Gerhard Haegler, who are employed at Kohler, visited from Saturday until Monday with home folks.  
Mr. and Mrs. Ed. Wittkopf of Plymouth, and Mr. and Mrs. Aug. Falk of Mitchell, visited Sunday with Mr. and Mrs. Oscar Hintz.  
Aug. Wolfgram and Julius Dalieque, attended the funeral of their cousin, Mrs. Louisa Dickmann at Campbellsport, Sunday afternoon.  
John Waranius moved his residence and soft drink parlor back 18 feet, this gives Mr. Waranius extra parking space in front of his place of business.  
Mr. and Mrs. H. W. Krueger and son Kermit and their guests, Mr. and Mrs. Emil Huberty of Milwaukee and Mr. and Mrs. C. W. Baetz and daughter Phyllis, spent Thursday at Fond du Lac.  
Mr. and Mrs. Anton Seifert and daughter Roma, Walter Dalieque, Carl Schuh, Phyllis Baetz, Beatrice Bowen, Rhea Dalieque, Mrs. Edgar Bowen, Mr. and Mrs. C. W. Baetz attended the senior class play at Campbellsport on Friday evening.  
—Math. Beisbier, Mr. and Mrs. Ed. Schield and Mr. and Mrs. Frank Fleischmann of St. Kilian were entertained at the home of Mr. and Mrs. Peter Greiten at Grafton, in honor of their daughter Ardell's first holy communion.

# The Max Bookplate

By AGNES MILLER

W. W. Norton & Co. The Century Co.

## SYNOPSIS

Miss Wilkes, a dignified old lady, who was a bookplate collector, was called to the telephone one day. She answered it and found it was her cousin Magistrate Juddes. He had written her a letter and she had written him a letter. She had written him a letter and she had written him a letter. She had written him a letter and she had written him a letter.

## CHAPTER VIII—Continued

"By the way," said Miss Wilkes, "I have just received a letter from your cousin Magistrate Juddes. He has written me a letter and he has written me a letter. He has written me a letter and he has written me a letter. He has written me a letter and he has written me a letter."

"I have just received a letter from your cousin Magistrate Juddes. He has written me a letter and he has written me a letter. He has written me a letter and he has written me a letter. He has written me a letter and he has written me a letter."

"I have just received a letter from your cousin Magistrate Juddes. He has written me a letter and he has written me a letter. He has written me a letter and he has written me a letter. He has written me a letter and he has written me a letter."

"I have just received a letter from your cousin Magistrate Juddes. He has written me a letter and he has written me a letter. He has written me a letter and he has written me a letter. He has written me a letter and he has written me a letter."

desk, and I'll bring it to you directly, if you don't want to wait." It was a safe bet that no man alive would want to wait for anything. When Mr. Case had gone, with shaking hands I grabbed my paste-brush and stuck the bookplate on lightly, over the key, pressing it down until it presented exactly its original appearance. Then I took it to Mr. Case, and told him I still had to write the notices for book and plate as Mr. Darrow had ordered. He said he would return the book to plenty of time for that.

Back at my desk in a perfectly distracted condition, I was not reassured by feeling a rhythmical swaying in the atmosphere, and perceiving Miss Wilkes bearing down on me. "I'd never be interrupted, dear, if I'd known you were still doing that catalogue!" she cooed. "Mercy, it does take you a long time, doesn't it? Well, if you insist. Yes, dear, you can help me. Such trouble as I am in! You see, my cousin Magistrate Juddes—you've heard of him, of course?"

"Oh, yes!" I had. Nancy had brought him to my attention for the first time the previous afternoon. "Well, he saw that a certain old law book—Clarke's 'Notes,' I think they call it—was bought for us in Richmond last week. You know it, do you? Well, he wants to buy it, right away, and without fail. This morning he sent me this check for two hundred dollars—" she produced one drawn on a perfectly good bank, and signed Wilmer Ponsbury Juddes—"so I might get it for him at once."

"No price has been set on it yet," I remarked. "You'll have to ask Mr. Case about it." "Why, I did, dear. But Mr. Case says he has no orders from Mr. Darrow, and Mr. Darrow won't be here until Monday, so what am I to do?" "I don't see that anything's your fault," said I, profoundly weary. "Anyhow, Mr. Darrow's last orders are that the book is to be advertised in this catalogue. Too bad, but your cousin will just have to take his chance with other customers."

"But you see," pursued Miss Wilkes, "I gave him my word Wednesday that I would try to see about the book next day. I sent down an inquiry about it. Mr. Case by that trouble some rattled little Miss Barton yesterday afternoon, and this morning she tells she's overlooked giving the message. I am most dreadfully put out by her stupidity, for if she had delivered the message, Mr. Case could easily have asked Mr. Darrow to fix the price, and I am sure two hundred would have put a reserve on it, anyway."

"Gracious powers! Mr. Darrow would have wept hot salt tears on the learned neck of Magistrate Juddes for far less than that sum!" I had no time to gape again at Nancy's curious conduct, for Miss Wilkes added platonically: "And so I'm in a quandary! My cousin Magistrate Juddes is entertaining Congressman Sturgis in his home here over this week-end! Now, what do you suppose would be just the thing to do for him?"

"Stock exchange. . . Fifth avenue. . . Grant's tomb. . . Peacock alley. . . Polities. . . supper in Chinatown. . . I hazarded, but Miss Wilkes gasped as if I had laid down my hand on the Ark. "My dear Miss Fuller! You don't know who Congressman Sturgis is! He is a Sturgis of Sturgis in Sturgis county—"

"Virginia!" I shrieked in desperation, hitting my faithful desk an uncalculated whack. "For Pete's sake! Don't tell me!" Miss Wilkes looked considerably astonished, and I didn't blame her, for the effect on my nerves of learning that another representative from the "Fraying Colonies" was waiting that lawbook must have been a sight to see. I apologized. "I see I'm right. I just have indigestion. Do go on, Miss Wilkes; I love politics."

"So does my cousin Magistrate Juddes," stammered Miss Wilkes. "Here's the secret, dear. He's running for congress, you know, in the One Hundred and Forty-Ninth district. Election's coming, and the One Hundred and Forty-Ninth district is at ways uncertain and the national committee of my cousin Magistrate Juddes' party is taking special pains to win it this time. Of course you don't know it, but Congressman Sturgis has great influence on this committee. And the curious thing is, he is the great nephew of the Sturgis who wrote the 'Notes.' Now, you know how much Southerners think of family—"

"I do," I observed. "And so your cousin Magistrate Juddes believes that this unique family memento should be restored to Congressman Sturgis after generations of absence?" "How well you put it, dear! Now, do you see how you can help me? I will be personally absolutely responsible for that book if you will let me take it over the week-end. I'll deposit the check here as a guarantee of good faith, and bring the book back without fail Monday. I will explain all the circumstances to my cousin, Magistrate Juddes, and he will handle the matter suitably. Perhaps it might even be more delicate to present the book after Mr. Sturgis had shown his enthusiasm in seeing it. I know my cousin will buy it at the first possible instant."

"But—" "And I, Miss Fuller, would be infinitely indebted to you. My cousin Magistrate Juddes and I have all our lives been like brother and sister. His wife and I have been as one sister with another. I wish to see them prosper, with all my heart. They expect to entertain lavishly in Washington next winter, and I may count on you, Miss Fuller, that it is my ambition to get a connection in Washington; life there is so pleasant. I should be glad to return this favor to you some time in a useful way."

Having from childhood had an intense interest in fossil vertebrates, I have always thought it would be rather pleasant to be a curator of such objects in the National museum, especially if I could do some trifling on the side with a handsome young Arverian diplomat every afternoon at a tea-dance. But my sense of duty was such that I passed up the chance without a quiver, firmly con-

vinced that this new Virginian must be a further sort of Caucasian in the woodpile. "Miss Wilkes," I said more firmly than sweetly, "what authority have I to give you that book?" "Why, I'm a responsible, confidential executive here!" boomed the affronted Miss Wilkes. "Mr. Darrow would let me have it in a minute!" I knew that only too well. I said: "You refuse to entrust it temporarily to me, to show a prospective customer who has made a heavy deposit as evidence of good faith?" "Right," said I, succinctly. "Miss Fuller, this is nothing but spite of long standing; nothing but your everlasting conceit!"

She was gone, mortally offended, as the climax to a record wrong. Had I, after all, lost a good sale! How would I explain. . . anything. . . to Mr. Darrow? I certainly had not dashed the catalogue. And for what purpose had I lent the Clarke to Mr. Case, who still had it? The next number on the program was to arrange with the printer for a necessary delay in delivering the copy; a very order, for Mr. Gregory had been in the business fifty-four years out of his total of sixty-eight, and seemed to think he knew something about it. After he had said six or seven times that the catalogue couldn't be printed at all unless the copy was ready by noon; and I had countered with the statement that three o'clock was the first minute he could expect it; we agreed on two o'clock. As I rang off, Mr. Darrow brought me the law book, with which, he said, Mr. Case had finished.

The bookplate was exactly as I had placed it. I took it off again in trepidation. The key was in its hiding place. I locked book, bookplate, and key again in the drawer of the desk just as the clock struck twelve. Luncheon would again be sandwiches and coffee for me.

So I seized the chance to work without interruption for the first time that day, and at last, as the hands of the clock reached two, and Mr. Gregory's boy arrived to sit on a stool and inspect me dispassionately while I put on the final touches, I finished the catalogue copy. Clarke's "Notes on Medical Statistics in the Virginia Code" was described as one of very few known copies, in excellent condition, never leaves uncut, of rare interest to collectors of Virginiaiana; and, after my nocturnal researches, I had even thought of something to say about the bookplate. "Clever counterfeit of unidentified Colfax plate, presumed lost," announced the notice. "Shows interior of surgery of early Nineteenth century, featuring interesting scientific instruments; charming seascape in background. Nameless; no date. Unique."

The catalogue had gone in the arms of the boy, and I felt as if my luck was beginning to turn at last, when this feeling was confirmed by the sight of Mr. Roberts approaching on the sidewalk. I stretched the keys out of my purse in the front drawer of the desk, unlocked the lowest left-hand drawer, opened it, and slipped my hand under some papers to take out the law book. Suddenly my heart stood still. I threw the papers on the floor, looked, looked again. Then I fell back in my chair, and gasped frantically as Mr. Roberts fung the door open:

"It's gone!" "What's gone?" "Clarke's 'Notes'! Good Heavens, what shall we do?" Mr. Roberts demanded an explanation, I stared mutely in desperation at the floor, and wondered if I could really wait until five o'clock to have hysterics in decent privacy. Then I found myself in his office. I poured out my soul about Miss Wilkes, for it was she who I felt sure first had taken the book.

"How did she get your keys and unlock the drawer?" demanded Mr. Roberts, dashing my theory to pieces on the rocks of good sense. "Well, how did anybody?" I retorted. But he said she wasn't smart enough, at least, whoever had been, and I felt a shade better, especially when he laughed about Magistrate Juddes, and said he had heard of his political ambitions.

"Still, Mr. Roberts," I insisted, "there's another reason why she might want it—why everybody that's been trying for that book might want it! I sat up all night finding it out!" "All night! What did you find?" "You remember that counterfeit bookplate?" I began. He nodded. "Well, in accordance with Mr. Darrow's orders, I removed it; and beneath it, Mr. Roberts, snuff into the cover of the book, I discovered a tiny, old-fashioned key!"

"A key! In the cover! Let's see it." "It's gone, with the book. And I found something else. On Tuesday morning I was working in the history alcove; I found this paper there. It fell out of a book that was on a shelf."

I produced the yellow slip. Mr. Roberts frowned in amusement to recognize his own message returned to him thus strangely, and so battered. "Professor Harrington had picked it out to write on a list of books he wanted; it's still on the back. I was naturally quite surprised to come across it again as I have described. So I stuck it into my pocket. I have been so busy that I didn't think of it again until last night, when my attention was called to it while I was removing the bookplate."

"In what way?" (TO BE CONTINUED.)

**The Fatherly Catfish**  
"The palm for unselfish parenthood should go to a species of catfish," says Capper's Weekly. "Although the male of this," continues the farm weekly, "is so constructed that he needs an unusually large amount of food and though he has the accompanying voracious appetite to satisfy it, he fills his mouth with the eggs laid by his mate and carries them until the eggs are hatched."

**Pirates Drop Two**  
The ax has fallen among Donie Bush's Pittsburgh Pirates, and the first members of the squad to feel its effect were Pitchers Regis Leheny and John Deming, recruits. Both youngsters were believed by Bush to have the makings of ball players, but they lack experience. Leheny will be sent to Heine Groh's Salisbury club, one of the Pirate kindergartens. Deming will remain at his home until a minor league berth has been found for him.

## Heavy Hitters in Cub Outfield

ONLY two positions on the Chicago Cubs' squad are worrying Manager Joe McCarthy, who believes his outfield to be the best hitting corps of outer gardeners in the land, his pitching staff an "up and coming" threat, and his catching department "no cause for worry."

"It is hard to say just now what the Cubs will do," the Chicago Nationals' pilot said, "but if present appearances are of any consequence we should be at the top. I expect Pittsburgh to be the hardest club in the league to beat, with New York and St. Louis also standing in the way of the championship. Brooklyn should be a better club this year, and the same goes for Cincinnati. The race should be even closer than that of last season."

Reverting to his own team, the iron-handed but well-liked leader of Chicago's Northsiders said second and third base have caused him the most trouble, but these now have been pretty well filled from the outstanding material on hand. "Freddy Maguire and Norman McMillan, both newcomers, have shown good work at second, while Elmer Yeter and John Butler, the latter also a recent addition, make it hard to choose between them for the 'hot corner.' I consider all able to cover second and third with credit."

The other infield posts he has made up his mind about. Elwood English, twenty years old, is "a fixture at short," and Charley Grimm a "certainty at first," McCarthy said. Besides believing his outfield "the country's best hitters," the Cubs' pilot declares it also is good defensively. "The addition of Kiki Cuyler from the Pirates gives us a good ball player who is a powerful batter. He possesses a strong arm and is fast. I look for Hazen to make this season an outstanding one for the Cubs. "With Stephenson and Hack Wilson in left and center, and such extra strength as Cliff Heathcote and Earl Webb, is it any wonder that I say it is the greatest of hitting outfields?"

"The pitching staff looks good to me. It is young—only two men are over thirty—and is coming along all the time. The oldesters of the corps, Art Neff and Harold Carlson, are not through with the game by any means. Then there is Perce Malone, gotten from Minneapolis, a young fellow who should make good on the team. And the veterans, Root, Jones, Blake and Osborne, made a good showing in training."

**Illinois Experimenting for Sod for Gridirons**  
The football gridiron is to be put under the scientific microscope. The college of agriculture of the University of Illinois is seeking to solve for the athletic association the problem of maintaining a satisfactory turf for football fields. The experiments are to be conducted on 90 miniature gridirons, arranged like a checkerboard into one regulation field. Nine different grasses or turf plants are to be sown in strips running crosswise of the gridiron. These strips are then to be crossed at right angles with ten different amounts and combinations of fertilizers, running the length of the fields. Thus there will be 90 different grass and soil treatments for study. The experimental gridiron will be used by the Illinois squad for practice next fall, to subject it to the same treatment it would receive under actual playing conditions.

**Southwest Again Claims "Bo" McMillin as Coach**  
A. N. ("Bo") McMillin's advent at the Kansas State Agricultural college next fall as head coach of football will be a homecoming to the Southwest for the former Centre college gridiron star. McMillin was born at Fort Worth, Texas, and has spent most of his life in the Southwestern states. After leaving Centre, where his leadership of the "Fraying Colonies" carried that team to national fame in 1919, 1920 and 1921, McMillin went to Geneva college, Beaver Falls, Pa. After two successful years at Geneva he now succeeds Coach Charles W. Bachman, who resigned last fall to become head coach at the University of Florida.

**Leader of Red Sox**  
The photo shows Bill Carrigan, manager of the Boston American league team, who is confident his team will battle its way out of the cellar, so long occupied by the American league representatives in the Hub.

**Levinisky Going West**  
Battling Levinisky, veteran heavy-weight boxer, who has found the fountain of youth somewhere in his travels and is keeping it a deep secret, is planning an invasion of California shortly. The rejuvenated batter has quit Philadelphia and ere long will make Los Angeles his headquarters. Al Lippe, quite prominent and very well liked along the Pacific slope, has several tentative matches lined up for him.

**Pirates Drop Two**  
The ax has fallen among Donie Bush's Pittsburgh Pirates, and the first members of the squad to feel its effect were Pitchers Regis Leheny and John Deming, recruits. Both youngsters were believed by Bush to have the makings of ball players, but they lack experience. Leheny will be sent to Heine Groh's Salisbury club, one of the Pirate kindergartens. Deming will remain at his home until a minor league berth has been found for him.

**Adapters for A.C. Tubes**  
A harness for converting direct current receivers into A.C.-tube sets has been designed to accommodate five, six or seven tubes. It is made in several types for various combinations of tubes. The layout includes a filament transformer and a hum adjuster.

**Radio Audience Huge**  
If all the radio sets in the country were tuned in on one program the listening audience would exceed 35,000,000 persons, a recent survey shows. This is based on an ordinary average of 5.4 persons a set.

**Blue Flame of Danger**  
Watch the 171 power tube when using very high plate voltage on it. If the blue flame of ionization is noticed, cut down on the eliminator voltage and save the tube.

**Filament Regulation Found**  
An automatic filament regulator suitable for use with the shield grid tube, which has a lower current drain than the 201A, has been developed.

## PULLED FIRST OF TRIPLE STEALS

Harry Davis Given Credit for Engineering Play.

In a game at those old Columbia avenue grounds in Philadelphia, Harry Davis engineered what is probably the first triple steal in the history of the game. In this game the Athletics had the bases full with Davis being the runner on third. After the pitcher had the next Athletic batsman in the hole with "two and nothing," Davis figured that he would certainly "waste" the next ball, and quickly flashed the signal to the other runners to start with the pitch.

As the pitcher started his windup, Davis, who was a slow runner, and therefore receiving scant attention from the opposing pitcher and catcher, dashed for the plate, the runner on second started for third, and the runner on first headed for second. Harry had figured the play right—the pitcher "pitched out," and the batter being a right-hand batsman, this gave Davis an opening to slide over the plate with the run, the runner on second reached third, and the runner on first stole second, completing a triple steal.

Harry Davis is also responsible for an addition to the "squeeze play"—one that scored two runs on a "squeeze bunt" instead of only one. The Athletics introduced this "double squeeze" play in 1913 and worked it successfully six out of seven times that season, scoring two runs on a bunt on each occasion. The only time it failed to work was once against Washington, when, with nobody out and runners on second and third, Barry bunted a looping, little liner right into the hands of Chick Gandil, the Washington first baseman, who was tearing in to field the bunt, and the latter completed a triple play, as both runners were so far advanced they were unable to return to their respective bases.

**BASEBALL NOTES**  
The Association of Professional Ball Players of America has 2,425 members. Bob Browne, well-known infielder, has been signed to manage Lincoln in the new Nebraska State league. Catcher Fount Tillman, promising receiver of the Fort Worth Cubs, has been sent to Evansville of the Three-I league. Jack Dunn, manager of the Baltimore Orioles, is a keen follower of the turf and attends race meetings whenever he can. Baseball has its international flavor this year, too. On the University of Illinois team is a third baseman named Lyperopolous.

Ernie Wingard, former St. Louis Brown, who is now with Minneapolis, says he hopes to return to the big leagues after this season. Terre Haute of the Three-I league has sold Pitcher Tex Nugent to Tyler of the Lone Star loop. Nugent has been a relief hurler with the Tots for two seasons. Jim York, veteran southpaw pitcher, has been turned over to Birmingham of the NYP league by the Reading Internationals. He is the property of the Chicago Cubs. New York scribes are already counting the Giants "in." Andy Cohen has made the infield, while the catching staff is the best in the league—at least so they say.

Catcher Tip Tipton, with the Birmingham Barons this spring, has been handed to Tampa of the Southeastern league, rounding out Manager Elham's catching staff. Two of the most promising young pitchers in the major leagues this year are from Brown university. They are Hadley with Washington and Billings with Detroit. Bill Robb, a first sacker who has been with the St. Paul Saints of the American association, has been purchased by the Springfield Midgets of the Western association. Bill Huber, a veteran who did the third basing for the Buffalo champions in the International last season, has been purchased by Little Rock of the Southern league.

The Bloomington club of the Three-I league announces the purchase of Pitcher Rudy Wepper from Montgomery of the Southeastern circuit. He has had two years' experience. The Dallas Steers have sold Pitcher Leo Skildmore to Minneapolis of the American association. The Steers bought Skildmore from Baltimore of the International during the winter. Jimmy Moore, veteran player and manager who was burned in a hotel fire at De Funik Springs, Fla., during the winter, is recovering and hopes to don a uniform this season.

This Brannon the Browns have on second base is enjoying his first taste of baseball as how it is played in the majors. Last year he was with Tulsa in the Western league, a St. Louis-owned farm. Outright purchase of Clarence B. Huber, third baseman from the Buffalo club of the International league, was announced by President H. G. Allen of the Little Rock club of the Southern association. Battle for the third catching job with the Detroit Tigers was settled with the announcement that Eddie Phillips would be turned over to the Toronto Internationals. That leaves Pinky Hargrave the victor in a hot scrap that has been going on all spring.

**Head of Cagers**  
The photo shows Dr. Forrest C. Allen, an international authority on the game of basket ball, who has just been elected president of the National Basketball Coaches' Association of America. Doctor Allen's teams at the University of Kansas, during the past seven years, have won six championships of their conference.

**Sport Notes**  
Greyhound racing is extending to Egypt. Hilario Martinez, the young Spanish pugilist, was at one time a built-lighter in his native land. A race around the world by land, sea and air is being sponsored in Tokyo, Japan, to determine the minimum time and expense. Al Lippe, veteran pugilist manager, recently experienced the pleasure of watching five of his boxers win their bouts on the same card. After coaching at Montana state for seven years, Ott Romney recently resigned to assume charge of athletics at Brigham Young university in Provo, Utah. Dan O'Leary, the veteran long-distance walker, has walked well over 100,000 miles in competition since 1871. The distance is four times around the earth. The oldest and youngest contestants in the "Emion derby" from Los Angeles, Calif., to New York city, are Charles Hart, aged sixty-three and Ted Joseph, aged sixteen. In New York state a Jockey is rated an apprentice until he rides his fortieth winner. Elsewhere the period of his noviceship lasts until one year after the date of his first victory. The pacing division of the Hambletonian stake, to be first raced in 1930, has been named "The Geers" after the famous driver of light harness horses who died a few years ago. California is spending more than \$12,000 reconstructing its football field at Berkeley where next fall it will entertain rival squads on one of the finest turf gridirons in the world. The Chicago Federation of Labor has purchased a 100-acre site near the city on which a golf course and clubhouse will be erected for their exclusive use. Each one of the 300 members holds a labor union card. The Argentine Polo association plans to send a team to the United States to participate in the open championship in June. Cliff Bricker of Galt, one of Canada's chief hopes in the marathon race at the Olympics this year, has his legs insured for \$50,000. Ed Walker, famous end of Stanford's 1925 eleven, who was an assistant coach at Iowa last fall, will return to Stanford next fall as an assistant to Pop Warner.

## Remote Volume Control Is Decided Advantage

Radio joy is great or small, according to how the set is used. There are many homes in which radio is allowed to go full blast and all conversation, reading, card playing, eating, getting and other activities are greatly interfered with. Yet the use of a suitable volume control, especially if arranged for remote operation, will change any radio set from a curse to a joy by fitting a given program to any occasion. From dance music for shuffling feet to incidental music for the background of the dinner conversation, the radio rendition may be fitted to the occasion by means of a suitable—and handy—volume control.

Whether or not your set has a built-in volume control, there is decided advantage in providing it with a remote volume control. This function should be at your finger tips, so that whether you are holding a conversation, reading, dozing or doing anything else, you may instantly regulate your radio volume for the occasion, without having to get up and walk over to the set. For instance, you may be enjoying a radio program merely as a background to conversation or reading, when suddenly the program takes a turn and the subject matter becomes one of prime interest. Instantly the volume may be increased, and the radio feature fills the room and centers attention, only to be subdued when the program drops back again into secondary interest. Lack of volume is just as disagreeable when the radio feature is the center of interest, as excessive volume when the radio feature is of secondary interest. By having the volume control at your finger tips, however, the radio rendition is always ideal for the circumstances.

There are several methods of adding a volume control to the radio receiver, whether it be battery-operated or A.C. operated. The simplest, generally, is to shunt a variable high resistance across the antenna and ground terminals of the receiver. This method is proving highly satisfactory with sets employing the latest A.C. tubes, and is more desirable than alternating the filament or heater current. Another method is to place a variable high resistance across the secondary of the first audio transformer, although this method follows the tone and therefore affects the tone as well as the volume. A third method is to shunt a variable resistance across the loud-speaker, which is often the most convenient for remote operation.

Few radio enthusiasts realize the enjoyment which comes from having their set under control by means of remote volume control. The loud speaker rendition may be controlled from the dining table, the bridge table, the easy chair, the davenport, the sick room table—anywhere you may choose. If the house is wired for radio to allow the use of loudspeakers in any room, the volume control may be plugged into the same wiring or the volume control may be connected to the loud-speaker cord. In addition to volume, there is also the question of pitch or tone control. Some features, such as speech, distant music, jazz and band selections require extreme sharpness for satisfactory rendition. The usual loud-speaker generally provides this extreme sharpness. On the other hand, certain other features sound better if muted or dulled, just as certain selections sound better with the soft pedal. For such selections it is well to employ a radio "soft pedal," consisting of a variable high resistance in series with a ¼ mfd. condenser, the combination being shunted across the loudspeaker, so as to obtain any degree of "soft pedaling."—Radio World.

**Microphonic Noises in Sets Can Be Eliminated**  
Some tubes and some receivers are particularly susceptible to vibration and even the vibration of the loud speaker may cause a loud constant howl to be built up which will stop when the loud speaker is turned around or moved farther away from the receiver. Such action is called "microphonic" and the trouble is usually found to lie in the detector tube. The use of another tube for the detector may eliminate this trouble or there are metal and rubber caps now on the market which are helpful when placed in the detector tube. Microphonic trouble is sometimes caused by turning the detector rheostat too low and will disappear when turned up to normal. Cushion sockets are helpful and their action may sometimes be improved by not inserting the tube all the way, but instead just far enough to make good contact.

**Adapters for A.C. Tubes**  
A harness for converting direct current receivers into A.C.-tube sets has been designed to accommodate five, six or seven tubes. It is made in several types for various combinations of tubes. The layout includes a filament transformer and a hum adjuster.

**Radio Audience Huge**  
If all the radio sets in the country were tuned in on one program the listening audience would exceed 35,000,000 persons, a recent survey shows. This is based on an ordinary average of 5.4 persons a set.

**Blue Flame of Danger**  
Watch the 171 power tube when using very high plate voltage on it. If the blue flame of ionization is noticed, cut down on the eliminator voltage and save the tube.

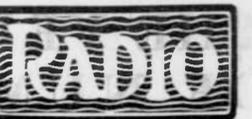

**Filament Regulation Found**  
An automatic filament regulator suitable for use with the shield grid tube, which has a lower current drain than the 201A, has been developed.

**Adapters for A.C. Tubes**  
A harness for converting direct current receivers into A.C.-tube sets has been designed to accommodate five, six or seven tubes. It is made in several types for various combinations of tubes. The layout includes a filament transformer and a hum adjuster.

**Radio Audience Huge**  
If all the radio sets in the country were tuned in on one program the listening audience would exceed 35,000,000 persons, a recent survey shows. This is based on an ordinary average of 5.4 persons a set.

**Blue Flame of Danger**  
Watch the 171 power tube when using very high plate voltage on it. If the blue flame of ionization is noticed, cut down on the eliminator voltage and save the tube.

**Filament Regulation Found**  
An automatic filament regulator suitable for use with the shield grid tube, which has a lower current drain than the 201A, has been developed.

**Remote Volume Control Is Decided Advantage**  
Radio joy is great or small, according to how the set is used. There are many homes in which radio is allowed to go full blast and all conversation, reading, card playing, eating, getting and other activities are greatly interfered with. Yet the use of a suitable volume control, especially if arranged for remote operation, will change any radio set from a curse to a joy by fitting a given program to any occasion. From dance music for shuffling feet to incidental music for the background of the dinner conversation, the radio rendition may be fitted to the occasion by means of a suitable—and handy—volume control.

Whether or not your set has a built-in volume control, there is decided advantage in providing it with a remote volume control. This function should be at your finger tips, so that whether you are holding a conversation, reading, dozing or doing anything else, you may instantly regulate your radio volume for the occasion, without having to get up and walk over to the set. For instance, you may be enjoying a radio program merely as a background to conversation or reading, when suddenly the program takes a turn and the subject matter becomes one of prime interest. Instantly the volume may be increased, and the radio feature fills the room and centers attention, only to be subdued when the program drops back again into secondary interest. Lack of volume is just as disagreeable when the radio feature is the center of interest, as excessive volume when the radio feature is of secondary interest. By having the volume control at your finger tips, however, the radio rendition is always ideal for the circumstances.

There are several methods of adding a volume control to the radio receiver, whether it be battery-operated or A.C. operated. The simplest, generally, is to shunt a variable high resistance across the antenna and ground terminals of the receiver. This method is proving highly satisfactory with sets employing the latest A.C. tubes, and is more desirable than alternating the filament or heater current. Another method is to place a variable high resistance across the secondary of the first audio transformer, although this method follows the tone and therefore affects the tone as well as the volume. A third method is to shunt a variable resistance across the loud-speaker, which is often the most convenient for remote operation.

Few radio enthusiasts realize the enjoyment which comes from having their set under control by means of remote volume control. The loud speaker rendition may be controlled from the dining table, the bridge table, the easy chair, the davenport, the sick room table—anywhere you may choose. If the house is wired for radio to allow the use of loudspeakers in any room, the volume control may be plugged into the same wiring or the volume control may be connected to the loud-speaker cord. In addition to volume, there is also the question of pitch or tone control. Some features, such as speech, distant music, jazz and band selections require extreme sharpness for satisfactory rendition. The usual loud-speaker generally provides this extreme sharpness. On the other hand, certain other features sound better if muted or dulled, just as certain selections sound better with the soft pedal. For such selections it is well to employ a radio "soft pedal," consisting of a variable high resistance in series with a ¼ mfd. condenser, the combination being shunted across the loudspeaker, so as to obtain any degree of "soft pedaling."—Radio World.

**Microphonic Noises in Sets Can Be Eliminated**  
Some tubes and some receivers are particularly susceptible to vibration and even the vibration of the loud speaker may cause a loud constant howl to be built up which will stop when the loud speaker is turned around or moved farther away from the receiver. Such action is called "microphonic" and the trouble is usually found to lie in the detector tube. The use of another tube for the detector may eliminate this trouble or there are metal and rubber caps now on the market which are helpful when placed in the detector tube. Microphonic trouble is sometimes caused by turning the detector rheostat too low and will disappear when turned up to normal. Cushion sockets are helpful and their action may sometimes be improved by not inserting the tube all the way, but instead just far enough to make good contact.

**Adapters for A.C. Tubes**  
A harness for converting direct current receivers into A.C.-tube sets has been designed to accommodate five, six or seven tubes. It is made in several types for various combinations of tubes. The layout includes a filament transformer and a hum adjuster.

# THE VERDICT OF NUMBERS

Most people know what they want. In spite of bitter experience, they get the best eventually—in tires, as in other things.

Above the baffling claims of rival tire manufacturers and allurements of price-cutting dealers, the judgment of numbers cannot be denied:

## More People Buy Goodyear Tires Than Any Other Kind

Millions of motorists believe Goodyear makes "The World's Greatest Tire." Hence, its popularity.

This huge army has tested Goodyear Tires thoroughly, driving over 75,000,000 tire miles last year.

Goodyear leads over every other tire maker, by many thousands in yearly production.

We give a service of the same high quality as the Goodyear Tires we sell.

Get acquainted with us and Goodyear Tires—soon. You'll be delighted with both.
